Original Equipment Integration of NRS Expands Across North America

More Vehicle Manufactures in North America are using NRS as their disc brake foundation in an increasing number of vehicles and platforms than ever before, and on platforms that represent North America's biggest sellers - Light Trucks and SUVs.

With consumers demanding that these platforms stand up to heavy payloads and extreme use - and provide car-like on road performance at the same time - car designers are raising the bar in what today's brakes need to deliver.

To achieve this combination of truck toughness and luxury car performance, a growing number of OE development teams have turned to NRS as their foundation layer. This growth includes NRS MAXX, NUCAP's solid plate version of NRS.

This use of NRS within OE adds to the expanding use of NRS across the entire industry. NRS is rapidly becoming a global standard for mechanical attachment in racing, special vehicle applications, premium ceramic, air disk, and more.

As the FMSI has not yet incorporated mechanical attachment standards within its reference system, we have provided the enclosed catalogue for your review.

NRS PRODUCTION FACILITIES ▣ GLOBAL

- NUCAP Aftermarket ▣ Toronto Canada
- NUCAP O.E ▣ Toronto Canada
- Sera Company ▣ Osaka, Japan
- Siam Sera Co. ▣ Bangkok, Thailand
- ADI Metal Parts ▣ Pamplona, Spain
